

COMMUNITY SCIENCE CAREERS

Community Science offers a dynamic environment where people can use their professional skills to promote social change. We employ highly qualified people from diverse disciplines, perspectives and backgrounds. At Community Science, we encourage our team to follow their passions and we provide opportunities for development in their areas of interests.

Dr. LaKeesha Woods and Dr. Joseph Clift share some thoughts about working at Community Science.

Q: What helped you make the decision to work at Community Science?

Dr. Woods: The mission, values, and structure of Community Science made me want to work here. I was looking for a setting where I could do applied work; that is, research and practice that could be readily applied to improve community programs and increasing our knowledge related to enhancing the well being of youth, families and diverse communities.

Q: What would you say to someone considering working for Community Science?

Dr. Woods: It is critical to consider your fit with Community Science. Working in a small, interdisciplinary organization that conducts work with a variety of entities can be exciting; however, the pace, funding climate, “real-world” factors that impact doing research and programming in the community, etc., can require adjustment and might not fit with everyone’s professional goals or work style.

Q: What do you value most about working at Community Science?

Dr. Clift: It’s an inclusive organization where diversity is welcomed and staff are free to be themselves. This enables us to perform better and contribute to our project work. Community Science believes in investing in their employees. I like knowing that Community Science is there to help mentor me and build me into the social science practitioner that I aspire to be.

The work that we do matters; by doing our work, we are contributing knowledge to the social science field and providing necessary information to our clients about their programs. The projects we work on have wide-spread implications on the health and social well being of communities. We would not do a project that ran counter to any of our values of social justice and inclusiveness. That says a lot about our company.

Global Community *Our staff is proficient in several languages and has worked in areas spanning the continents. We encourage you to learn more about where a career at Community Science can take you.*
